

Lesson Overview

First of all, **GREAT** job finishing the data analysis lesson and two case studies! Now that you've had some solid experience analyzing real datasets with Python and descriptive statistics, here's a short lesson where you'll be exposed to a workflow for your analysis outside Jupyter notebook.

Jupyter notebooks are a powerful tool for learning, reports, etc, but there are definitely other environments and workflows you can use to make your analysis even better. This will be just a few quick concepts to make sure you understand different ways to run Python, and why you might use one vs. another.
